

Water Playground Equipment

[Water Tricycles](#)

Water Tricycles

Water tricycle is a patent product developed by our company, of which the sixth-generation product is available.

Bearings are all made of the nylon material imported from foreign countries, thus it can effectively avoid seawater corrosion and greatly reduce maintenance workload as well.

The rear shaft is equipped with safety shaft covered by a seamless pipe and a thicker wall, which would favor the tourists with double safety as they would not be endangered even if the rear shaft is broken.

Three float wheels are filled with permanent floating material, thus avoiding the possibility of hollow wheel leakage.

The design for lower center of gravity is adopted on condition that enough buoyant force is ensured, thus being able to stand against Class 4 wind waves.

A basket is equipped under the seat for storing goods, thus the tourists can set their mind at ease to riding.
